MASTER PLANS OF THE PORTS OF LOVIISA AND KUNDA ARE PUBLISHED

The masterplans bring together the strategic development needs and plans of the current port management company AS Kunda Sadam and the Port of Loviisa, bringing in also the refined ideas to strengthen both ports as a developing foreign trade logistics centers.

The specific feature in the master plan process was the inclusion and emphasis on the foreseen roro connection between the ports and how to accommodate it into current port activities. The roro service between these two ports aims to serve primarily the so called Refec-corridor area which consists of the eastern parts of the two countries.

These studies highlight and prioritise the development tasks seen by the ports.
